Incoming Actions

Incoming actions define the trigger for a translator entry:

» MIDI messages

» Keystrokes

» Timer

» Serial port data

» Enable/disable the current preset

» Opening a project file

Processing ("Rules")

A sequence of rules can be defined to be processed if the incoming action matches:

» Assignments of variables, e.g. pp = 20

» Simple expressions, e.g. pp = og + 128

» Labels and goto, e.g. goto "2nd Options"

» Conditional execution, e.g. IF pp < 20 THEN do not execute Outgoing Action

Outgoing Actions

If the incoming action was triggered, and the rules did not cancel this action, the translator entry's outgoing action is executed:

» MIDI messages

» Keystrokes

» Mouse movements

» Serial port data

» Create/start/stop timer

» Change active preset

» Enable/disable the current preset

» Execute program

» Execute AppleScript (OS X only)

MIDI Features

» Use any MIDI ports available on the system

» Ships with own virtual MIDI ports

» MIDI Router for cross-connecting MIDI ports

» Define MIDI aliases for convenient access

» Very low latency
